

Munch My Articles Manual

Munch My Articles is simple but powerful and useful tool to grab articles and spin them.

It can be used to grab and spin articles for use with Traffic X Suite or you can use the spinned articles to post in article directories, web 2.0 sites, and more.

Newbies may ask “What is a spinned article?” A spinned article is an already written article that is automatically revised and edited by replacing words in the article with synonyms and editing word, sentence, and paragraph structures in the already written article.

“Why do we spin articles?” We spin articles because it is easier then writing

your own articles to post and monetize. It also prevents your spun article from being tagged as duplicate content from search engine filters. When search engines tags an article/content/website,etc. as being duplicate content you mostly likely won't get indexed, and even worst you won't get ranked for your article you post. Spinning articles is an efficient and effective tool if you are posting articles online to make money. It is also a time saver and you can get more articles out faster. The spun article can be used in various ways.

Getting Articles

In the Grab Articles Tab of Munch My Articles you can get articles on multiple topics at one time.

1 – Keywords To Search – In this section you will load a file of keywords/topics that you want to collect articles about. The keywords/topic file is a simple text file with your keywords/topics one per line. You can find an example keywords/topic file format by [clicking here](#).

Of course you will want to add your own keywords/topic s in your text file that you want to collect articles for.

Once you have made your keywords/topics file you can load that file into this section by clicking the “!” button.

2 – Save Folder – In this section you can choose where to save the articles that Munch My Articles collects. Simply press the “!” button in this section to select your save

folder.

3 – Number Of Articles To Grab Per Keyword – In this section you can choose how many articles you want to collect per keyword/topic you have in your keywords/topics file. The minimum amount of articles you can collect is 1 per keyword/topic. The maximum amount of articles you can collect per keyword/topic is 30. Please note that not all keywords/topics will have as many articles to collect as others. If a keyword/topic does not have as many articles as you selected, the program will collect as many articles as it can. Some keywords/topics will not have any articles at all resulting in 0 articles collected. So if you notice that your keyword/topic collected no articles, the program is not broken, and it’s mostly likely because your keyword/topic has no articles to collect.

When you have configured this section to your liking simply press the “Grab Articles” button to being collecting articles.

Please note that after the program collects articles from one keyword/topic it pauses for 5 minutes before collecting articles for your next keyword/topic. This is so you do not get a temporary ban for grabbing articles from the articles directory too fast.

UPDATE ON Version 1.2 – In this version you can set how many minutes to wait between grabbing articles. Default is set to 5 minutes.

Spinning A Single Article

The screenshot shows the 'Munch My Articles' web application. The window title is 'Munch My Articles'. The interface has three tabs: 'Grab Articles', 'Spin Article', and 'Batch Spin Articles'. The 'Spin Article' tab is active. The interface includes three input fields: 'Load Article To Spin:' with a red '1' next to it, 'Save Spinned Article:' with a red '2' next to it, and 'Spin Option:' with a dropdown menu showing 'Readable Spin' and a red '3' next to it. Below these fields is a 'Spin Article' button. At the bottom, there is a 'Status:' section showing 'Progress: None'.

In the Spin Article tab of Munch My Articles you can spin a single article that you collected with the Grab Articles tab or you can spin any article/text in a text file that you may have collected manually or wrote yourself. Note that only text in a .txt file can be spinned (you cannot spin .doc,.pdf,or any other type of file).

1 – Load Article To Spin – In this section you can load your article file that you want to spin. Simply press the “!” button in this section.

2 – Saved Spin Article – In this section you can select where to save your spinned article. Simply press the “!” button in this section to select where to save your spinned article.

3 – Spin Options – In this section you have two spin options. Readable Spin and Super Spin.

The option you select drastically affects the way your article will be spinned.

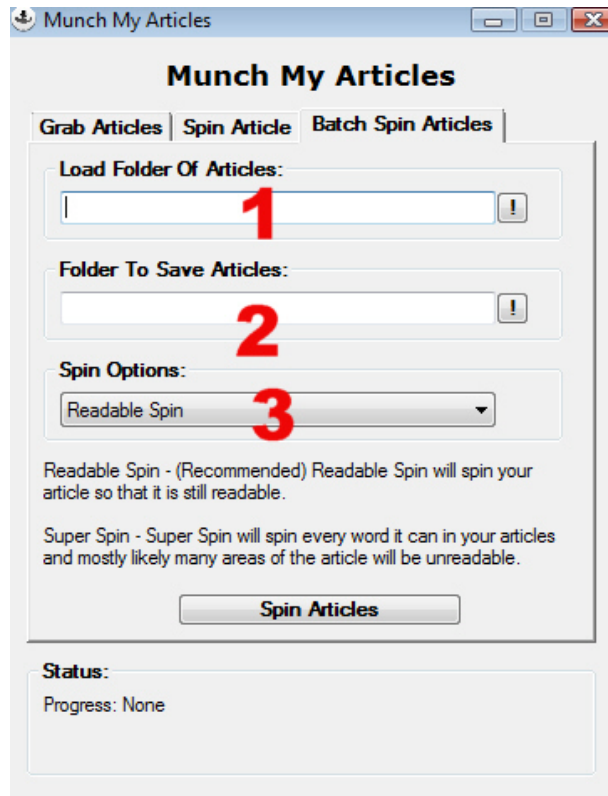

Readable Spin – I recommend that you use this option. When this option is selected your article will be spinned with our “AI Spin” technology. It will spin the article so that the article is spinned but still very readable to your viewers. I spent over a month working on this “AI Spin” technology so that we could have a very advanced automated article spinner that spinned articles to avoid duplicate content filters and have an article that is still readable to our article viewers.

Super Spin – Super Spin uses basic spin technology found in most spinning programs. It will replace as many words in the article with synonyms even though the replaced word may not make much “readable” sense to viewers of the page. Unlike the Readable Spin option which “smartly” replaces words so the spun article is still readable, this option will just replace words with any synonym it finds for the word, likely making the sentence improper grammar. I do not recommend using this option for articles that people will be viewing. This option is great if you have a blog/site/page that is cloaked and will redirect the viewer to a different page so they never see your article. This is good for cloaked pages as your viewers will never see the page, but search engines will spider the page and see a very unique content.

Want a tip on what option to use? Try them both and see which one you like better!

When you have configured this section simply press the “Spin Article” button to spin your single article.

Spinning Batch Articles

If you prefer to Spin multiple articles at a time you can use the Batch Spin Articles tab to do so.

1 – Load Folder Of Articles – In this section you can load a folder full of articles to spin. These articles must be .txt files. To load your articles folder simply press the “!” button in this section.

2 – Folder To Save Articles – In this section you can select where to save your spun articles. Simply press the “!” button in this section to select your save folder.

3- Spin Options – This option is exactly the same functions as before.

When you are ready to spin your multiple articles press the “Spin Articles” button.

Please note that grabbing articles and spinning articles in the “Super Spin” mode can take some time. You can hide the program in the background by clicking the Munch My Articles tray icon. This is where your clock is located on your computer. Double click to hide Munch My Articles. When the program is hidden you can simply double click the tray icon for Munch My Articles again to show the program.

Munch My Articles Icon in the tray looks like this:  and is located near your clock on the computer.
