

Wonder Word Combine Manual

Wonder Word Combine is software that will combine/ add two sets of text file's words together to make many combinations of words.

The software is very useful for making keyword files, username files, title files, name files, and much, much more! You can get very creative!

You can even take your saved combined file and combine/ add more words to it to make even more word combinations!

Wonder Word Combine GUI (Graphical User Interface)

1 – Words To Add: - In this section you will select your text file with word or word phrases that you want to add to the beginning (Start) or ending (End) of the main file which you will load in section 2. Simply press the “!” button in this section to select your text file with words.

2 – Main File: - In this section you will load your second text file with word(s). Your “Words to Add” file will be added either to the beginning or end of this file depending where you want the words added (section 4). Press the “!” button in this section to select your main word text file.

3 – Saved Combined File: - In this section you choose where you want to save the output of your combined file. You simply press the “!” button in this section and go to a folder where you want to save the combined file and type in a name you would like to name the file, like My Combined Words.txt. The file you select does not need to exist. Wonder Word Combine will automatically make the file and save your combined words in this file.

4 – Where would you like to add your words? – In this section you will select where you want the “Words To Add” file’s words to be added to the main file. You have two options. You can add the words to the start of the main file or the end of the main file. To add the

words to the Start/Beginning of the Main File's words select "Add Words To Start Of Main File". If you would like to add the words to the End of the the Main File's words you would select "Add Words To End Of Main File".

5 – Would You Like To Randomize Your Combined Save File? – Enable this option if you would like Wonder Word Combine to randomize your saved combined file. If you leave this unchecked Wonder Word Combine will save the combined words the way it was added to the combined files.....meaning, lol, no randomization.

6 – Title Your Combined Words? Upper Case First Letters – This is very useful for people using this program to make a "title oriented" combined files. This will basically make the first letter of each word upper cased. You cannot use the Lower Case option (section 7) while using this option, and vice versa.

Below is an example of what happens when using this option.

Words To Add File has these words in it:

taste good
are delicious

Main File has these words in it:

apples
oranges

I will select the "Add Words To End Of Main File Option" so that my added words will be at the end of the Main File's words. I will also enable "Would You Like To Add A Space Between Added Words" (section 8).

The output of the combine files with the "Title Your Combined Words?" enabled will look like this:

Apples Taste Good
Oranges Taste Good
Apples Are Delicious
Oranges Are Delicious

The "Tile Your Combined Word?" option basically makes your words titled.

7 – Lower Case Your Combined Words? Makes Everything Lower Cased – When this option is enabled it does the exact opposite as the "Titled" option. This option can be used if your files already have Upper case words in them and you want the output to be all lower case. You cannot use the "Titled" (section 6) option if using this option.

NOTE: You DO NOT NEED TO USE the "Titled" or "Lower Case" option. If you do not use these options your combined file will be output the way your original "Add Words File" and "Main File" are formatted.

For example if you do not use either of these options this is how it would turn out:

Your “Add Words” file looks like this:

taste Good
are delicious

Your “Main” file looks like this:

apples
Oranges

You enable the option ““Would You Like To Add A Space Between Added Words” (section 8) and I selected to “Add Words To End Of Main File”.

Your combined output would look like this:

apples taste Good
Oranges taste Good
apples are delicious
Oranges are delicious

8 – Would You Like To Add A Space Between Added Words – When you enable this option you will put a space between the Main File’s words and the Added Words file’s words. If you notice in the examples above I always enabled this option. If I did not enable this option there would be no space between my added words and the Main File’s words. So with the last example without this option enabled the output would look like this:

applestaste Good
Orangestaste Good
applesare delicious
Orangesare delicious

Notice, there are no spaces between the added word and the main word. You will be using this option if you want a space between the added word and “Main File” words. Another example is if I would have selected to add the words at the “Start of the Main file” (section 4) with this option off. My output would look like this:

taste Goodapples
taste GoodOranges
are deliciousapples
are deliciousOranges

This option cannot be used with the “Would You Like To Remove All Spaces?” (section 9) option.

9 – Would You Like To Remove All Space? – When this option is enabled it will remove all spaces in the combined words. This is useful if you are making a username file. This option cannot be used with the “Would You Like To Add A Space Between Added Words” (section 8) option.

Using the same “Add Words File” and “Main File” that we were using in the last example above with the “Add Words To End Of File” (section 4) selected, “Titled” (section 6) selected, and this option enabled the output would look like this:

```
ApplesTasteGood  
OrangesTasteGood  
ApplesAreDelicious  
OrangesAreDelicious
```

Notice, there are NO SPACES. =) If we had the lower case option selected all words would be dropped to lower case, which most likely would be better if you are making a username file.

Note: The options in Section 8 and 9 do not have to be used. If they are not used the output of the combined file will be in the same format as the original files you are combining.

10 – Combine Files Button – When you have configured Wonder Word Combine you simply press this button to start combining the files. When the program is done combining files it will notify you that it’s done.

Ok, Ok, I know this sounds a little complicated and I’m not the best manual writer either. LOL. I’m a programmer! But, really it’s not that hard to use. It can be used for many applications where you want to combine words. The best way to get to know the program is play with it! Make two files with a few words in it. Combine them with the different options and have and look at the output. You will see how the whole thing works by doing so.

Remember, you can also add more words to the already combined files! So you can make a massive list of long tail keywords if that’s what you are using it for! You can make mass usernames for use with Traffic X Suite. Mass titles too!

If you really need help feel free to contact me. For the free software, I really ask you play around with the software and learn how to use it yourself as doing support for the free software can be timely and is not as important as support needed for paying customers. I will answer your questions but it may take longer!

I hope this software helps you with your word combining needs!

Enjoy,
